HAEMATOLOGY

PROTHROMBIN TIME

Mean Normal Prothrombin Time	=	12.8	Sec
On Patients Blood	=	13.9	Sec
Prothrombin Ratio	=	1.09	
International Normalized Ratio (INR)	=	1.13	

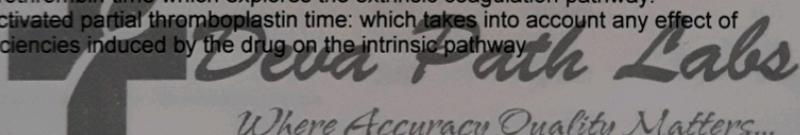

Comments:

International Normalized Ratio(INR) is the most recommended method for monitoring of oral anticoagulants.

The dose of anticoagulant can be adjusted between the limits by two parallel biological assays:

1. Prothrombin time which explores the extrinsic coagulation pathway.

2. Activated partial thromboplastin time: which takes into account any effect of deficiencies induced by the drug on the intrinsic pathway.

Where Accuracy Quality Matters...

PARTIAL THROMBOPLASTIN TIME (PTTK/APTT)

Patient value = 30.4 Sec.

Control value = 29.2 Sec.

BIOCHEMISTRY

TSH 3rd Generation

Sample: Serum
Method: ECLIA

0.657 0.55 - 4.78

µIU/mL

TSH 3rd Generation

Clinical Significance:

TSH levels are elevated in primary hypothyroidism and low in primary hyperthyroidism. Evaluation of TSH is useful in the differential diagnosis of primary from secondary and tertiary hypothyroidism. In primary hypothyroidism, TSH levels are elevated, while in secondary and tertiary hypothyroidism, TSH levels are low or normal. High TSH level in the presence of normal FT4 is called subclinical hypothyroidism and low TSH with normal FT4 is called subclinical hyperthyroidism. Sick, hospitalized patients may have falsely low or transiently elevated TSH. Significant diurnal variation is also seen in TSH levels.

Guidelines for TSH levels in pregnancy, as per American Thyroid Association, are as follows:

PREGNANCY TRIMESTER	BIOLOGICAL REFERENCE INTERVAL	UNIT
FIRST TRIMESTER	0.100 - 2.500	µIU/mL
SECOND TRIMESTER	0.200 - 3.000	µIU/mL
THIRD TRIMESTER	0.300 - 3.000	µIU/mL
